

InfiniLite™ RGB Controller Series

- Ultimate in Lighting Flexibility for Game Cabinets
- Independent Control of Multiple RGB Sources
- Easy-to-Use Programming Software Included
- Three Models for Varying Lighting Effects

Game cabinet lighting is now faster and easier to program than ever before.

The InfiniLite RGB Controller from Elite Gaming Technology trumps other gaming cabinet controllers with complete control and maximum flexibility for all cabinet lighting effects, giving you more breathing, blinking, chasing, and rotating for button decks, top boxes, cabinet sides and more.

Radically Simple for More Effects

InfiniLite radically simplifies programming multiple RGB sources. The InfiniLite Controller Command Tool software automatically generates the ASCII string commands that define each lighting routine. The simple interface lets game designers experiment with lighting options – they just cut and paste the commands.

The InfiniLite Controller is available for EGT's NITRO and MERCURY cabinets. It is also available separately.

InfiniLite I

InfiniLite II

InfiniLite III
