

The MERCURY Slot Cabinet

- Ergonomic Design for Player Comfort
- Designed for 23" Monitors
- Smaller Footprint than Traditional Slant-Tops
- Includes InfiniLite™ RGB Controller

Elite Gaming Technology's MERCURY slant-top slot cabinet does more with less.

All the latest ergonomic features for immersive game play are here:

A 75° degree viewing angle of dual monitors improves player focus. All-digital sound and oversized control surfaces surrounded by soft-touch materials lets players lay back for an engaged yet relaxed experience.

Any game can run on a MERCURY cabinet, even those designed for upright cabinets, without modifications. Casinos can take advantage of this flexibility, and open up casino floor sight lines with the cabinets' slim design and small footprint. A series of MERCURY cabinets can be arranged in multiple configurations.

Custom lighting effects are easily programmed with the InfiniLite RGB Controller and software command tool.
